Professional Summary

Computer Science graduate specializing in Cloud Security Engineering and Network Defense. Proficient in Linux (Ubuntu/Kali) and TCP/IP networking, with a strong focus on building "Proof of Work" through documented technical labs. A proactive problem-solver dedicated to securing cloud-native environments and implementing zero-trust architectures.

Projects

0 Trust SSH/BASTION SERVER

- Removed Password Authentication, Implemented Cryptographic Ed25519 Keys Authentication System.
- Removed Access to Root Login
- Implemented Intrusion detection System Fail2ban.
- Protected port 22.
- Implemented firewall.
- Managed breach logs successfully,

Network Reconnaissance & Analysis Lab

- Executed deep-dive scanning and service enumeration using Nmap, Dirb, and Wireshark.
- Documented TCP/IP stack analysis and 30+ custom network queries in a structured GitHub repository.

Cloud-Ready "Proof of Work" Portfolio

- Deployed an automated technical blog using Jekyll and GitHub Pages to document daily security milestones.
- Organized hands-on labs in Linux administration and networking to provide transparent evidence of technical competence.

Education

Bachelor of Computer Science

Institution: NFC Institute of Engineering and Technology, Multan, Pakistan.

Year of Graduation: 2018

- Dean's List Honors
- Programming Contest Champion

Languages

- English (Professional)
- Hindi/Urdu (Native)
- Turkish (Fluent)

Technical Skills

- Operating Systems: Linux (Ubuntu, Kali Linux – Persistent & Live), Windows, Windows Server.
- Networking: TCP/IP Stack, DNS, DHCP, HTTP/S, SSH, Packet Analysis, Subnetting.
- Security Tools: Nmap, Wireshark, Metasploit, Dirb, Wazuh (Basic), Splunk (Learning).
- Cloud & Virtualization: VirtualBox, VMware, Foundational Knowledge of AWS/Azure Security Groups & IAM.
- Tools & Platforms: Git, GitHub, Jekyll (Chirpy), Markdown, Technical Documentation.
- Programming/Scripting: Python (Foundational), Bash Scripting (Automation), SQL.
