Professional Summary

Computer Science graduate specializing in Cloud Security Engineering and Network Defense. Proficient in Linux (Ubuntu/Kali) and TCP/IP networking, with a strong focus on building "Proof of Work" through documented technical labs. A proactive problem-solver dedicated to securing cloud-native environments and implementing zero-trust architectures.

Projects

0 Trust SSH/BASTION SERVER

- Removed Password Authentication, Implemented Cryptographic Ed25519 Keys Authentication System.
- Removed Access to Root Login
- Implemented Intrusion detection System Fail2ban.
- Protected port 22.
- Implemented firewall.
- Managed breach logs successfully,

Network Intrusion Detection (IDS) Lab

- Tech: Suricata, Ubuntu (Promiscuous Mode), TCPdump.
- Key Achievement: Engineered custom signatures to detect Nmap stealth scans and unauthorized enumeration.
- Validation: Captured real-time attacker MAC/IP metadata during live simulation.
- Cloud Link: Mimics AWS GuardDuty and Azure Sentinel threat detection logic.

Software-Defined Networking (SDN) Lab

- Tech: Linux Namespaces (ip netns), Virtual Ethernet (veth), IPTables.
- Key Achievement: Architected a segregated "Web" and "Database" environment on a single host.
- Validation: Enforced zero-trust via firewall rules, ensuring strict cross-tier isolation.
- Cloud Link: Demonstrates underlying architecture of Amazon VPCs and Kubernetes networking.

Experience

IT/ Network Administrator 2019-2022

Managed enterprise network infrastructure, ensuring 99.9% uptime.
Hardened security via stateful firewalls, IPS, and zero-trust ACLs.
Conducted audits and log analysis to patch network vulnerabilities.
Optimized connectivity and latency through traffic analysis and protocol tuning.

Education

Bachelor of Computer Science
Institution: NFC Institute of Engineering and Technology, Multan, Pakistan.
Year of Graduation: 2018

Languages

- English (Professional)
- Hindi/Urdu (Native)
- Turkish (Fluent)

Technical Skills

- **Operating Systems:** Linux (Ubuntu, Kali Linux – Persistent & Live), Windows, Windows Server.
- **Networking**: TCP/IP Stack, DNS, DHCP, HTTP/S, SSH, Packet Analysis, Subnetting.
- **Security Tools:** Nmap, Wireshark, Metasploit, Dirb, Wazuh (Basic), Splunk (Learning).
- **Cloud & Virtualization:** VirtualBox, VMware, Foundational Knowledge of AWS/Azure Security Groups & IAM.
- **Tools & Platforms:** Git, GitHub, Jekyll (Chirpy), Markdown, Technical Documentation.
- Programming/Scripting: Python (Foundational), Bash Scripting (Automation), SQL.
